Customer Reviews

"Biologist, writer, and photographer Sept has authored an excellent book that details various organisms inhabiting the northeastern coast of North America. The introduction, written in an easy-to-understand language, describes tides and their formation, various intertidal habitats

including sand beaches, mud flats, rocky shores, intertidal zones, and microhabitats. . . . Excellent black-and-white illustrations of common animals for identification add to the allure. This book will serve as a valuable guide to any person visiting a beach or students and scientists in the field looking to identify common organisms on the beach."--A.K. Volety, Choice"This is an elegantly simple and very nicely produced book that will be widely appreciated and used by shoreline ecologists and serious beach-combers interested in the fauna and flora of the Northern Atlantic coastline from Cape Cod to the Canadian Maritimes. . . . This is a publication that all North Atlantic beachcombers will want to own."--Mark Bertness, Quarterly Review of Biology"For \$20 this book is a great buy. Useful and useable, it will be an asset to any naturalist who wants to understand shore life in full."--Roy John, Canadian Field-Naturalist

"A worthwhile addition to the library of anyone who is interested in marine life or who spends time walking shorelines. I'd buy it for the high quality photographs alone!"--Wayne R. Petersen, author of Birds of New England and Birds of Massachusetts

This is an excellent book, with terrific pictures, and a not too complex introduction. Should there ever be a revised edition, it would be nice to have a bit more biology of how these species do their things. But it would certainly be my number one tide pool book. Other field guides are nice too, but I suspect that this is the one that is the one that will get stuffed into the knapsack.
