See Inside Recycling And Rubbish (Usborne See Inside)

Synopsis

A fun and fascinating flap book that follows rubbish on a journey from the bin to the sorting factories and recycling centres. Over 60 flaps reveal how glass, metal, plastics and paper are recycled and what happens to the rubbish that can't be recycled. Includes a large, fold-out page showing the amazing machines that separate materials in recycling centres.

Customer Reviews

'Perfectly pitched for Key Stage 2, a mix of facts, humour and novelty flaps...This series is proof that the right non-fiction still sells' - The Bookseller; 'A super collection of information books from Usborne, which really engage the reader by providing interesting information, colourful graphics and plenty of flaps with yet more information' - Parents in Touch; 'This is a really important topic and it is essential that our children understand the issues involved and how they can play their part. This book takes a comprehensive look at what happens to the horrifying amount of rubbish which is produced, but does so in an approachable and interesting way. From what happens when we throw rubbish away and how it is collected right through to how it is recycled, the amount of detail in the book is amazing...This book will be a great help for topic work. Don't miss the rubbish facts at the end! - Parents in Touch; 'With brightly coloured, engaging illustrations and characters by Peter Allen, this is a very busy book, packed full of information on recycling and resource recovery that will entertain older children, while hopefully teaching them about where their rubbish goes...and what they can actively do to help the environment, all presented in a positive, non-preachy manner' -

Resource

I gave this book to my four year old grandson for his birthday. It was an immediate hit. First of all, he was enthralled with the British words sprinkled throughout the book, and especially the word "rubbish". The illustrations don't miss a step about where the rubbish goes and what happens next. There are plenty of flaps to see inside the machines, etc. This book inspired a family visit to the local recycling plant for a tour. You will not be disappointed with this wonderful book.

I have several of these Usborne "see inside" books and this one is the best. It goes into great detail about how the garbage (rubbish) is separated, recycled and reused. The middle of the book has a fold out with a huge illustration (including flaps) of what happens in a sorting plant. Very informative! My 4 and 6 year old boys love it, but this could easily keep an older child entertained for hours with all of the many flaps and interesting information included. It also covers waste treatment, composting and creating energy from the gases released by rotting garbage under the soil in landfills and in incinerators. EVERYTHING you need to know about garbage! Five Stars! Other good ones from this series is "See Under the Ground" and "See inside your Body".
