Customer Reviews

In 2000, Teach for America alumnus and Yale graduate Zeke Vanderhoek had a radical idea:

students learn better from better teachers. His vision of what test prep could be if written and taught by great educators led him to start Manhattan Prep. Since we began, Manhattan Prep has grown from a boutique tutoring company to one of the world's leading test prep providers, offering GMAT, GRE, LSAT, ACT, and SAT courses and tutoring worldwide. We believe test prep should be real education. From our instructors to our materials, we work to teach you the skills you'll need to succeed on the test, in school, and beyond.

Great review book for anyone looking to brush up on this subject for their exam.

Great! Thanks!

Very helpful and education for granddaughter.

good

About me: I have taken the GRE twice with these scores and current conversions (2002: V:770/170, Q:780/164; and 2011: V:620/161, Q:800/166). In 2002, I prepared for 30 hours in all, over 3 weeks; in 2011, I prepared over 120 + hours across 5 weeks. For math, I largely relied on Barron's only (maybe squeezing in a little KAPLAN). This background should help you in gauging my experience and expectations. I bought this volume as part of the 8 book pack. Bottomline: As part of that pack, this might make good sense if you buy all for \$90. As a stand alone, for \$15-20, I'd suggest skipping this and sticking to Barron's for the Math Review and official ETS books for testing your preparation. Pro: It holds folks by the hand and reminds them of how fractions, decimals, and percents work interchangeably. It takes you back to where you started in grade 5th or 6th, maybe. (Con: For many of us, who have always done some mental math and belong to a certain generation now going extinct, a lot of this very basic stuff is not needed at all, but is still easy to skim over.) Pro: It is a good workbook for working with the three concepts. Reservations: A significant proportion of questions are there to help you get comfortable working with the three concepts. They do not have the feel of GRE questions. The real hard set at the end might be too hard (as the book admits), but not a bad exercise if you are willing to spend 2 minutes (or even more) per question. Again, these hard questions do not quite invoke for me a sense of alignment with the GRE style of question formulation. The 8-book Manhattan Prep set has been called an overkill, and I did dread that (still do) with limited time on my hands. Still, I was able to do this book in just about 8-9 hours on a Saturday.

But then this is the easiest of the areas. My biggest critique is that Barron's manages to convey and highlight all the important KEY FACTS in their concise Mathematics Review, while Manhattan doesn't even attempt that kind of a summary. I am treating it as a workbook, for now.
